

Aditya Jawanjal

DevOps/Linux Admin/AWS Cloud Engineer

+917709227845 ◇ jawanjaladi1@gmail.com ◇ Hinjawadi, Pune, Maharashtra, 411057 ◇ [LinkedIn](#) ◇ [Portfolio](#)

PROFESSIONAL SUMMARY

Aspiring DevOps Engineer with hands-on expertise in Linux system administration, AWS cloud infrastructure, and CI/CD automation. Proficient in Infrastructure as Code (IaC) using Terraform and Ansible, container orchestration with Docker and Kubernetes, and building automated deployment pipelines with Jenkins. Experienced in implementing monitoring solutions using Prometheus and Grafana, and managing cloud services including EC2, S3, RDS, VPC, and IAM. Strong background in bash and Python scripting, networking protocols, and system hardening. Proven ability to design self-healing infrastructure and optimize cloud deployments for reliability and performance.

EDUCATION

Bachelor of Engineering in Information Technology , Sant Gadge Baba University	Aug '20 — Jul '24 Amravati, India
HSC in HSC , Maharashtra State Board	2020 Achalpur, India
SSC in SSC , Maharashtra State Board	2018 Achalpur, India

SKILLS & INTERESTS

OS & Platform Linux (Ubuntu, Red Hat Linux, CentOS, Amazon Linux), Windows

Linux Administration: Linux Commands, System Administration, User & group management, permissions, cron jobs, package management, system hardening, Package Management

Scripting Bash, Python, YAML

Networking SSH, TCP/IP, DNS, DHCP, NAT, HTTP/HTTPS, Subnetting, Firewalls, Routing Tables, VPC (AWS)

DevOps Tools Jenkins, Ansible, Terraform, Docker, Kubernetes, GitHub, GitHub Action

Monitoring and Logging CloudWatch, Prometheus, Grafana

Cloud Services AWS (EC2, S3, RDS, Lambda, VPC, IAM, Cloud Watch, Route 53, Elastic Load Balancer, CloudTrail, SNS)

Soft Skills Teamwork, Communication, Adaptability, Time Management, Problem-Solving

Languages English, Hindi, Marathi

PROJECTS

End-to-End Cloud Monitoring and Deployment [Link](#)

- End-to-End Cloud Monitoring and Deployment
- Monitoring 10 EC2 instances which was created and configured using Terraform and Ansible.
- Used Prometheus and Grafana for Monitoring.
- When CPU load of any of the instances goes above 85% it will trigger and send alerts to the Monitoring team.

End-to-End CI/CD Pipeline for Netflix App Deployment on AWS [Link](#)

- End-to-End CI/CD Pipeline for Netflix App Deployment on AWS
- Provisioned AWS EC2 using Terraform HCP and automated CI/CD with Jenkins, Maven, Nexus, and Tomcat.
- Integrated Prometheus and Grafana for real-time monitoring, gaining hands-on experience in infrastructure automation and observability.

Self Healing Infrastructure [Link](#)

- Designed a self-healing system using Prometheus, Alertmanager, and Ansible to auto-recover failed NGINX Docker containers.
- Achieved near real-time recovery via custom alerts, Flask webhook, and Python-triggered automation.
- Automated recovery of failed NGINX containers in <60s — achieving 99.9% uptime across self-healing clusters

End-to-End Cloud Native Deployment [Link](#)

- Containerized a personal portfolio application using Docker and pushed the image to a public container registry.
- Deployed the application on a Kubernetes cluster using a Deployment manifest with 10 replicas.
- Exposed the application using a NodePort Service (port 80 → nodePort 31111) to enable external access to the containerized workload.
- Defined and managed Kubernetes resources using YAML manifests.

CERTIFICATIONS

DevOps with AWS Course Completion Certificate, Naresh IT

Responsive Web Design, freeCodeCamp
